

Oilseeds: World Markets and Trade

Rapeseed and Sunflower to Drive 2026/27 Vegetable Oil Trade

Global vegetable oil exports, including oilseeds exported on a vegetable oil equivalent basis¹, are expected to reach a record 141 million tons in 2026/27, up 2 percent from 2025/26 and driven by growth of rapeseed and sunflowerseed oil and seed exports. Around 60 percent of vegetable oil consumed globally is imported, either as vegetable oil or as an

oilseed that is crushed in the importing country. This traded proportion of consumption is expected at 59 percent in 2026/27, down from a 62-percent average over the last decade. This ratio continues to fall, largely driven by increased domestic palm oil usage in producing countries. This pushed the traded proportion of palm oil consumption from nearly 75 percent in 2017/18 to under 60 percent in recent years.

Together, palm oil and soybean oil comprise nearly two-thirds of vegetable oil consumed globally. Palm oil, the top consumed oil, has seen a declining share in recent years as production growth has been outpaced by soybean oil. However, both are expected to be only minor contributors to growth of global vegetable oil and equivalent exports in 2026/27. Global palm oil production is expected to be down slightly from the record set in

2025/26, while exports are nearly 6.3 million tons below their peak in 2018/19. Sizable growth in Indonesia industrial usage driven by biofuel policy expansion is the primary limiting factor for exportable supplies, and global palm oil exports are expected to decline by 2 percent. Similarly, total soybean oil and equivalent exports are expected to increase by only 1 percent in 2026/27 on higher industrial usage in the United States and Brazil despite strong soybean production growth.

Rapeseed oil and sunflowerseed oil comprise around one quarter of global vegetable oil consumption. Rapeseed oil, the third most consumed oil, has maintained its share of global

¹ Oilseeds are converted to a vegetable oil equivalent basis using average extraction rates to estimate total oil content.

consumption in recent years, enabled by production growth in Canada and Russia. Sunflowerseed oil is expected to recover its share of consumption on strong area growth in 2026/27 following 2 years of below-average Black Sea yields that led to smaller crops. Growth in exports of vegetable oils and equivalents is expected to come from rapeseed and sunflowerseed oil in 2026/27. Rapeseed oil and equivalent exports are forecast to rise by 8 percent on strong export growth expected from Canada, Russia, Ukraine, and Australia. The United States and China are expected to see the largest growth in rapeseed oil and equivalent imports. Sunflowerseed oil and equivalent exports are forecast to rise by 15 percent on robust export growth for Ukraine and Russia due to larger crops, with India and China expected to be the highest growth importers.

OVERVIEW 2026/27

Global oilseed production is raised this month on increased Australia and Russia rapeseed, Canada and U.S. soybean, and Kazakhstan sunflowerseed, despite lower production for India soybeans and European Union rapeseed. Oilseed trade is raised on higher rapeseed exports from Australia and Uruguay and soybean exports from the United States and Canada. Global crush is raised on increased European Union soybean, Kazakhstan sunflowerseed, and European Union rapeseed. Global oilseed carryout is raised on Australia and China rapeseed ending stocks with increased Argentina soybean countering decreased U.S. soybean and Canada rapeseed ending stocks. Global protein meal trade is raised slightly with higher Kazakhstan sunflowerseed meal and Russia rapeseed meal exports. Global vegetable oil trade is raised on increased Kazakhstan and Russia sunflowerseed oil and China soybean oil exports, countering lower Indonesia palm oil exports. Global vegetable oil carryout is raised marginally on increased European Union rapeseed oil ending stocks countering decreased China soybean oil ending stocks.

The projected U.S. season-average farm price for soybeans is raised 60 cents to \$12.00 per bushel.

OVERVIEW 2025/26

Global oilseed production is raised slightly this month on higher Canada and European Union rapeseed and Argentina sunflowerseed. Global oilseed trade is raised with increased Canada rapeseed exports. Global oilseed crush is increased on European Union rapeseed and soybean, and Canada rapeseed. Global oilseed carryout is raised on Argentina soybean and U.S. peanut ending stocks countering lower Canada rapeseed stocks.

Global oilseed meal trade is raised on European Union soybean meal and Canada rapeseed meal exports. Global vegetable oil trade is raised on Colombia and Ecuador palm oil, China soybean oil, and Philippines coconut oil. Global vegetable oil carryout is lowered on India palm oil.

The projected U.S. season-average farm price for soybeans is raised 10 cents to \$10.50 per bushel.

EXPORT PRICES

U.S. soybean export prices climbed during the second half of August, exceeding \$525/ton for the first time since November 2023, driven by reports of dryness across many U.S. growing regions and reduced good/excellent crop ratings compared to the same period last year. Steady U.S. soybean export sales signaling strong demand also supported rising prices. Brazil and Argentina soybean

export prices moved largely upward in tandem with U.S. prices, as did soybean meal export prices for all three major exporters.

U.S. soybean oil prices fluctuated near \$1,600 and \$1,700/ton during August, below early June and July highs, due to volatile but increasing petroleum prices. EPA's small refinery exemption announcements inspired a spike for U.S. soybean oil export prices in early September, though this has since reversed. Export prices of Argentina and Brazil soybean oil, still priced well below U.S. soybean oil, fluctuated but remained largely unchanged on net. Indonesia and Malaysia palm oil export prices increased over the month, tracking petroleum prices.

ENDNOTES

REGION DEFINITIONS

North America: Canada, Mexico, the United States

Central America: Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Caribbean: Cuba, Dominican Republic, Haiti, Jamaica, Trinidad and Tobago

South America: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

EU: Austria, Belgium/Luxembourg, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden. Effective January 1, 2021, the separation of the United Kingdom (UK) from the European Union (EU) was complete, including trade between both entities. Starting in May 2021 with the release of 2021/22 data, grain PSDs reflect EU27 (shown in the PSD system as “European Union”) and UK separately. Beginning with the release of 2021/22 data, historical data for both EU27 and the UK are provided for 5 years (2016/17 through 2020/21).

Other Europe: Albania, Bosnia and Herzegovina, Former Yugoslavia, Gibraltar, Iceland, North Macedonia, Montenegro, Norway, Serbia, Switzerland, United Kingdom

Former Soviet Union: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan

Middle East: Afghanistan, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, and Yemen

North Africa: Algeria, Egypt, Libya, Morocco, Tunisia

Sub-Saharan Africa: all African countries except North Africa

East Asia: China, Hong Kong, Japan, South Korea, North Korea, Macau, Mongolia, Taiwan

South Asia: Bangladesh, Bhutan, India, Nepal, Pakistan, Sri Lanka

Southeast Asia: Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, Vietnam

Oceania: Australia, Fiji, New Zealand, Papua New Guinea

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
